

SAFETY NETTING

BARRIER NETTING SYSTEMS

Keeping your employees and materials safe is not always an easy task. Engineered vertical barrier netting systems provide protection against stacked falling objects by creating a wall of netting along walkways or near workstations where employees are working. Surround your storage spaces with our barrier netting systems to keep workers safe and materials secure.

Expect exceptional customer service with a response time under 48 hours and on-demand delivery.

Meet multiple safety compliance needs with one customizable system at a competitive price.

Engineered systems that meet and exceed all specification and safety regulation requirements.

Protects employees and visitors from injury or death from falling objects.

INDUSTRIAL BARRIER NETTING SYSTEM

An “engineered” system consisting of custom-fitted netting panels, rigging hardware and columns.

SAFETY STANDARDS MET BY NETTING SYSTEMS

As warehouses grow in size and space is at a premium bulk stacking of products is becoming more common in many industries. Stacking products maximizes vertical space but presents a larger safety risk as it does not utilize storage racking. In the event that one of these stacks collapses or is knocked over by a forklift, the results can be catastrophic.

Engineered vertical barrier netting systems provide protection against this happening by creating a wall of netting along walkways or near workstations where employees are working. Systems are designed based on the total height of coverage, the weight of each box or pallet that is stacked, and the total length of coverage. Freestanding or floor-to-ceiling posts are designed and engineered for each specific application.
