Failure to Read, Understand, and Follow the Installation Manual may result in injury or death

Figure 2A - Typical Layout - Crossover Series

Typical Layout

- Install on a flat (5-degrees or less), clean, dry surface, only when the change in elevation between roof levels is 2 feet or less.
- Ladder support posts must be 6' (2.4m) from any parallel fall hazard/edge.
- Each system comes with a unique layout drawing with details specific to that system.
- No modifications or alterations are permitted to the layout without manufacturer's written approval.

WARNING

**Failure to Read, Understand, and Follow the Installation Manual
may result in injury or death**

Figure 2B - Typical Layout - Ladder Series

Typical Layout

- Install on a flat (5-degrees or less), clean, dry surface, only when the change in elevation between roof levels is over 2 feet (one side is > 2 feet above the other).
- Tie-back rails must be 6' (2.4m) from any parallel fall hazard/edge.
- Each system comes with a unique layout drawing with details specific to that system.
- No modifications or alterations are permitted to the layout without manufacturer's written approval.

WARNING

**Failure to Read, Understand, and Follow the Installation Manual
may result in injury or death**

Figure 3 - Ladder Assembly - STEP 1

Ladder Assembly - STEP 1

- Position RGF-145 just above 3rd rung or as shown in system specific drawing, before securing all needed rungs.
- Ensure all rungs are facing the same direction.
- Build both 'ladder' assemblies to the required height shown on the system specific drawing.
- Torque set screws to 25 ft-lbs. If torque wrench is not available, tighten set screw until it contacts pipe, then tighten 1.5 more revolutions.

WARNING

Failure to Read, Understand, and Follow the Installation Manual
may result in injury or death

Figure 4 - Platform Assembly - STEP 2

Ladder Assembly - STEP 2

- Align ladder sections facing each other and connect the platform to the back of the top rung on each side, using supplied bolts.
- Slide fittings / handrails onto posts to complete connecting the two sides.
- Set screws in all fittings should be tightened to approximately 18 ft-lbs. If torque wrench is not available, tighten set screw until it contacts pipe, then tighten one more full revolution.
- Plug open top with RGF-Cap.
- Top of top rail should be 42" above platform.
- Center of Mid-Rail should be 21" above platform.
- Each system comes with a unique layout drawing with details specific to that system.

**Failure to Read, Understand, and Follow the Installation Manual
may result in injury or death**

Figure 5 - Diagonal Bracing for Crossover Series - STEP 3a

Diagonal Bracing for Crossover Series - STEP 3a

- Set screws in all fittings should be tightened to approximately 18 ft-lbs. If torque wrench is not available, tighten set screw until it contacts pipe, then tighten one more full revolution.
- Plug open top with RGF-Cap.
- Two baseplates to be used at each diagonal brace.
- Refer to unique layout drawing for your system for specific details.

Failure to Read, Understand, and Follow the Installation Manual
may result in injury or death

Figure 6 - Tie-back for Ladder Series - Upper Level - STEP 3b

Tie-back for Ladder Series - STEP 3b

- Set screws in all fittings should be tightened to approximately 18 ft-lbs. If torque wrench is not available, tighten set screw until it contacts pipe, then tighten one more full revolution.
- Plug open top with RG-Cap.
- 6' rails between posts – for tie-back counterweights.
- Top of top rail should be 42" above walking surface for tie-back.
- Center of Mid-Rail should be 21" above walking surface for tie-back.
- Refer to unique layout drawing for your system for specific details.

WARNING

**Failure to Read, Understand, and Follow the Installation Manual
may result in injury or death**

Figure 7 - Post/Base Connection - Diagonal Bracing and Tie-back

Post/Base Connection - Diagonal Bracing and Tie-back

- Post into base – diagonal brace or tie-back – two baseplates.
- Post may be installed in any of the 3 holes to prevent tripping or positioning base near existing features.
- One set-screw in the bottom baseplate required to be secured against post.
- Torque to 25 ft-lbs. If torque wrench is not available, tighten set screw until it contacts pipe, then tighten 1.5 more revolutions.

It is the user's responsibility to maintain the railing system in good working condition to ensure proper function of the railing system
